Our experts help clients leverage the potential of Azure resulting in improved business agility and efficiency. We help simplify your infrastructure and applications management processes leading to a faster time to market. Our dedicated Microsoft azure solutions put your data next to the cloud for performance and security. Our team accelerates innovation and time-to-market. Optimize your resources across private and public cloud with Microsoft azure! Increased cloud

connectivity performance!

Amazon Web Services

Our Company is committed to offer Amazon Web Services. Our team utilizes Amazon web hosting services to provide a comprehensive and complete web solution for all your business needs. We also use Amazon web hosting services and Amazon web services for search engines, media and entertainment, high performance computing, e-commerce and enterprise IT and lot more. With our AWS solutions, you can store, correlate, and monitor real-time log data, including sources like AWS CloudTrail, Pinpoint network threats with continuous detection and 24x7

security monitoring and Protect web applications from attacks like the OWASP Top Ten with technology that auto scales with your AWS workload.

Make your IT transformation a success! We utilize proven methodologies and focuses on the strategic needs of our clients' businesses to determine the technology capabilities needed to support their long-term goals. Our team is ready to plan, build, and run trusted cloud computing for your organization. We are a full service, information technology Solutions Company offering high class IT consulting services for the implementation of Enterprise Application and Technology Solutions to help organizations optimize business procedures to deliver cost savings and increase productivity, competitiveness and efficiency. Our unique consulting services help our client focus on their business while we plan for their technology requirements through our proven consulting services. Our IT consulting services provide guidelines to clients that help them to enhance their IT business infrastructure. Our staff

has extensive experience in all areas of IT consulting service that helps our clients alleviate challenges and deliver best results within deadlines. We are a dedicated team with extensive experience in technical IT operations. We provide a full range of IT consultancy services to help in your IT projects.

What we deliver?

- Automation through integrated technology designed around industry best-practice approaches, including ITIL, COBIT and ISO/IEC20000
- Process improvement from strategy through process design and implementation
- Time savings by automating the daily necessities of service management
- Cloud service management to manage the rapid change of a cloud environment

Our help desk services help to drive personalization in the workplace, by

providing support to the business role that the user assumes in the organization. We ensure to empower users through automation, self-help and self-heal functions. We offer proactive user support through real time monitoring, end user IT analytics, and proactive support.

Managed Services

We can provide highly tailored managed services to our customers to supplement their internal IT support resources and skills to meet the demanding SLAs required by their business. These range from our 7x24 NoC and SoC to monitor the health, performance and security status of their networks and systems, helpdesk support for specific applications or business functions, and other tailored services augmenting specific skillsets our users require. Furthermore, our managed services can extend to support hybrid cloud and even multiple cloud environment easing our customers' efforts to administer the provisioning, performance management and overall management of such complex computing

environment.

Managed IT services allow businesses to delegate their IT operations to an expert third-party organization that specializes in handling these responsibilities. These third-party organizations, known as Managed Service Providers (MSPs), are responsible for the entirety or portions of

a business' IT systems, as agreed upon in a Service Level Agreement (SLA). IT equipment is typically procured by the client, and depending on the SLA, Managed Service Providers may provide round-the-clock monitoring, issue resolution and reporting, and more. Cloud computing has allowed managed IT services to expand beyond the regions and borders that would constrain the average break/fix IT through the adoption of Software as a Service (SaaS) technologies, as well as Infrastructure as a Service (IaaS) and Platform as a Service (PaaS) also. These capabilities allow managed IT services to scale at a rate dramatically larger and faster than in-house IT operation or break/fix providers.

Managed IT services that are coupled with a Network Operations Center to proactively monitor systems, resolve issues and perform work with a level of expertise and efficiency unparalleled to other solutions.

In today's fast-paced world, IT is struggling to keep up with security concerns. Between a growing number of devices on the network, compliance requirements and pressure from business stakeholders to keep critical

data safe, there's no room for error. Our approach to our customers' security is demonstrated in our security framework. We base our work on the core principles of the CIA triad: Confidentiality, Integrity and Availability.

We build security solutions specifically for your unique needs with every tedious, but critical, detail considered for security and risk implications. It's this attention to detail that has made AltF9 a preferred managed IT service provider for companies of all sizes, in just about every industry from coast to coast.

Remote infrastructure management

Our company has skilled IT teams with deep knowledge of all aspects of the IT infrastructure hardware, networks, connectivity, mission-critical applications. We utilize state-of-the-art tools that track every layer and component of the infrastructure. Our remote infrastructure solutions allow quick deployment of solutions to avoid downtime. Our skilled team has deep expertise and experience to deliver remote infrastructure management services to customers' world over from its India offices. We help you in meeting the challenge of providing high-quality services, and at the same time bringing down your costs of infrastructure management.

Mobile Computing

Our Company delivers Mobile Device Management (MDM) and mobile application management. Get secure and support mobile devices with MDM. Our Mobile Device Management (MDM) enables you to securely manage and provision access to smart phones and tablets from any device with a browser and internet connection. It also manages applications and content on the devices. With Mobile Management,

your employees can self-enroll their devices for instant provisioning of corporate access and automated policy enforcement that provides added security.

Our cloud-based solutions improve enterprise productivity, increase IT efficiency, control costs and strengthen security.

Microsoft Intune

Get peace of mind with Microsoft Intune cloud-hosted, secure and unified device management. Simplify your IT operations and ensure higher enterprise efficiency! With our Intune-managed Office mobile applications, you can maximize your enterprise productivity. This unified tool supports almost all mobile devices and mobile platforms: Windows, Windows Phone, iOS, and Android. Our Microsoft's cloud solution, will assist you during the initial setup and configuration ensuring that all needed technological tasks will be performed and you will have fully operational system that suits to your environment and devices. With our reliable and flexible Intune solutions, we provide 24/7 monitoring and support, deploy applications, keep your system up to date, offer remote assistance.

Disaster Recovery & Business Continuity

Protecting your business from human errors, terrorist activities, hardware failures, massive power outages and cyber-attacks is a bit challenging. But our professionals are specialized in disaster recovery and business continuity solutions that minimize downtime and the impact on your employees, your customers, your partners and your business. We provide reliability, redundancy and resiliency to your IT and cloud infrastructure to keep your business running. Our Disaster Recovery and Business Continuity Services include data, application and workspace recovery solutions designed to meet the needs of your business.
